DETAILED ACTION

Allowable Subject Matter

Claims 1-5, 7, 8, 18-20 and 22-27 (renumbered as claims 1-16, respectively) allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 2, 18, 22 and 24 (renumbered as claims 1, 2, 11 and 13, respectively), the prior art of record, specifically Helstab, et al. (U.S. 6,073,031), Ali et al. (U.S. No. 2003/0197679) and Nojima et al. (U.S. 6,336,038) disclose a docking station for a wireless communication device, the docking station comprising: a support structure; a cradle situated in the support structure to receive the wireless communication device; a display situated in the support structure to display information received by the docking station from the wireless communications device; an energy source internal to the docking station which supplies energy to the docking station and to a rechargeable energy source in the wireless communication device when the wireless communication device is received in the cradle (see office action dated 2/23/05). However, the prior art of record neither alone or in combination neither teach or provide motivation for one skilled in the art to have the docking station and wireless device with an internal energy source having more charge capacity than the rechargeable energy source, sufficient to supply energy to the wireless device when the docking station is mobile and an electrical interface between the docking station and the wireless communications device including multiple contacts, one of the contacts coupled to accept a video signal from the wireless communications device, and a video interface circuit coupled to convert the video signal to drive the display.
